

Using Visual Sensors for Outdoor Asset Protection

Outdoor Visual Sensors such as Emza's WiseEye send *immediate, visual notification of intruders* over the Internet to cell phones—or even 3rd party Monitoring Stations.

Visual sensors suppress false positives from weather and light effects much more effectively than cameras with video motion detection. Thus you receive **ONLY** the information you need—rather than hundreds of annoying non-events.

Receive visual verification of intruders in all weather conditions--day or night
